## Kingston Hire

We all know good, regular service means optimal performance, less down-time and longer machine life. A cost effective service and maintenance schedule means your investment is protected. A reliable service provider like KK Kingston can save you money, time and heart-ache!

Kingston Service is here when you need us, with the expertise, tools and parts (in-stock) to get you out of trouble and keep you out of trouble. We share the wise perception that preventative measures are always better than expensive patch-up fixes. So sign up for a Service Maintenance Contact today!

## Service & Maintenance Contracts

### We take care of it!

Our Service Contracts are designed to provide an all-round package that delivers our customers with exceptional value for money and peace of mind.

Every service performed carries our full commitment to providing quality & genuine parts for reliable operations and optimal performance.

Unlike other service providers all our technicians are professionally trained. Our Service Repair Center is fully supported by the brands we represent in PNG. You can be guaranteed the parts we use are genuine and the best option for you.

### Preventative Maintenance

Only customers under a Service Maintenance contract get:

### Additional Benefits

- Warrantee on labour performed within the contract period
- Additional 1-year warrantee for Compressor Airend Overhaul
- 1-year motor rewind against any workmanship defects

### Added Savings

- All consumables at special discounted rates

### Up to date reports

- Receive a comprehensive report after each quarterly service

## Consumables, Parts & Spares

At KK Kingston we also carry a wide range of consumable spares, such as air filters, oil filters, fuel filters, water separators etc. For more information about our range of spares please contact us at the numbers provided on this leaflet.

## PDIs & Load Testing large diesel gensets

All machinery sold by us will undergo a pre-delivery inspection to ensure it is in full running condition as set by the factory before it is delivered to our customers.

For large diesel-generator units machines are connected to a load-bank to ensure correct operation of the prime driver and alternator under load.

## Getting the right size generator

This is extremely important and can be the cause of many future problems. Kingston Service team will conduct an analysis of a customer's electrical requirements to accurately recommend a generator size and power factor correction which is usually needed.
